Preface We, the CMOS-MEMS volume editors, welcome you to this second installment of Advanced Micro & Nanosystems. Today's microelectromechanical systems (MEMS) are built much the same way as silicon integrated circuits (ICs) are, borrowing a variety of materials and processes from the IC industry.

This edition of 'CMOS-MEMS' was originally published in the successful series 'Advanced Micro & Nanosystems'. Here, the combination of the globally established, billion dollar chip mass fabrication technology CMOS with the fascinating and commercially promising new world of MEMS is covered from all angles.

BiCMOS) foundry. This way, even very advanced CMOS technologies with multiple (copper) metallizations can be exploited for MEMS [35]. The main limitation of the post-CMOS technologies is the stringent thermal budget for the add-on fabrication steps, limiting process temperatures to about 400 °C. POST-CMOS MEMS & NEMS

CMOS-MEMS integration can improve the performance of the MEMS (micro-electromechanical systems), allows for smaller packages and leads to a lower packaging and instrumentation cost. As argued in this article, processing MEMS above CMOS is the most promising approach for CMOS-MEMS integration, but it limits the thermal budget for MEMS processing.
